Contents

Table of Abbreviations

CN	Concept Note
DAE	Direct Access Entities
FP	Funding Proposal
GCF	Green Climate Fund
IRMF	Integrated Results Management Framework
LTA	Long-Term Agreements
LTS	Long-Term Strategy
NAP	National Adaptations Plans
NDA	National Designated Authorities
NDC	Nationally Determined Contributions
DbM	Disbursement by Milestone
RRMF	Readiness Result Management Framework
TOR	Terms of Reference

I. Objective of the Guide

This guide is designed to help Direct Access Entities (DAEs) access support from the GCF through its Readiness and Preparatory Support Programme (the Readiness Programme), using the DAE support financing modality, in line with the Readiness Strategy 2024-2027. The guide is subject to further refinement based on feedback and findings from the participatory operationalisation of the new modalities. This aims to enhance efficiency and speed of access while ensuring impactful readiness support and practical results.

II. Readiness Programme Overview

The Readiness Programme is a key initiative established under the GCF Governing Instrument. It is designed to provide resources for capacity-building activities and technical assistance to enable countries and entities to directly access GCF and other climate funds. Operational for nearly 10 years, the programme has supported countries in strengthening their institutional capacities, coordination mechanisms, and strategic frameworks, including Nationally Determined Contributions (NDCs) and National Adaptation Plans (NAPs), to develop climate action agendas.

Building on the successes and lessons learned over the past years, the GCF has revised the readiness strategy to align with the broader GCF Strategic Plan for 2024-2027, which emphasises enhanced programming capacities and direct access. To this effect, the revised Readiness Strategy introduces a novel modality of support for DAEs, focusing on strengthening their programming capacities and facilitating their access to GCF resources and broader climate finance opportunities, in alignment with country priorities. With specific reference to the GCF investments, readiness resources will be channelled to support programming capacities of DAEs in line with the 11 targeted results of the GCF Strategic Plan (ref. Annex 1) pertaining to developing country support, direct access programming, climate-resilient agriculture; sustainable management of terrestrial and marine areas; low-emission climate-resilient infrastructure; clean energy; novel solutions and emerging technologies for hard-to-abate sectors; locally led adaptation action; engagement of local early-stage ventures and micro, small and medium-sized enterprises (MSMEs) in climate solutions; and greater direct access to climate finance through "green" local financial institutions.

The Readiness Strategy 2024-2027 outlines three key objectives, applicable to both countries and DAEs:

Objective 1: Effective climate finance coordination and sequencing for climate investment planning and execution, including strengthening the enabling environment. The readiness portfolio target is set at 30 per cent of the USD volume of readiness resources to ensure fit-for-purpose support that lays the foundations for country programming capacities and direct access;

Objective 2: Paradigm-shifting pipeline development and implementation for adaptation and mitigation measures in line with countries' priorities and GCF programming targets. The readiness portfolio target is set at 60 per cent of the USD volume of readiness resources to signal a strong focus on advancing programming capacities and direct access and to ensure adequate resources; and

Objective 3: Use of knowledge-sharing and learning as one of the most impactful tools for capacity-building, particularly with respect to solving climate challenges that are common and shared by neighbouring countries and peer stakeholders. The readiness portfolio target is set at 10 per cent of the

USD volume of readiness resources to provide laser-sharp focus on impactful and carefully crafted activities.

Readiness support for DAEs must align with the three key objectives outlined above, with specific results and reporting requirements in line with the [Readiness Results Management Framework](#) (RRMF), which has been revised to reflect the Readiness Strategy 2024-2027.

III. DAE Financing Modality

Total Envelope: DAEs can access readiness support for up to USD 1 million per entity over a four-year period, in coordination with respective National Designated Authorities (NDAs) or focal points, and in alignment with country priorities. A differentiated approach is applied, taking into account each entity's programming capacity, expertise, experience and previous access to GCF funding and readiness resources. This ensures that entities with larger capacity gaps receive appropriate support, while more experienced DAEs with substantial GCF-funded portfolios are catered for accordingly.

The envelope will serve to establish and advance DAEs' capacities to effectively programme, implement and report on GCF-funded activities, as well as broader climate finance.

Specifically, support will be available for the following:

- "Last mile" accreditation processes to close gaps and meet the GCF accreditation standards (e.g. for clearing any outstanding accreditation conditions before concluding a legal agreement with GCF, which serves as a pre-requisite for direct access to GCF funds);
- Strengthening programming and implementation capacities, with a particular focus on developing high-quality concept notes (CNs) and funding proposals (FPs) and ensuring their effective implementation; and
- Strengthening reporting capacities, including implementation of the GCF integrated results management framework.

The GCF Secretariat provides further details on capacity-building areas in the Guide for Direct Access Entities on Strategic Planning of Readiness Support. The Readiness Programme is a flexible on-demand tool. Accordingly, the GCF Secretariat does not prescribe specific capacity-building activities under the DAE support window. Instead, it offers guidance on potential areas of support. DAEs have the flexibility to propose specific activities tailored to their unique capacity gaps and needs in line with the objectives of the Readiness Strategy 2024-2027[1]. The Guide on Strategic Planning of Readiness Support also offers insights on eligible and non-eligible costs to optimise readiness resources in line with the GCF Strategic Plan.

Sustainability measure and the financial criterion for DAEs: A specific financial criterion is applied when DAEs request funding based on a nuanced approach that balances the need for financial support with the risk of disincentivising revenue generation. The funding requested by DAEs, when broken down by year, must not exceed a set percentage of a DAE's average revenue over the previous three years preceding the request for support. This criterion will not apply to ministries and other government or public sector agencies.

[1] To facilitate the DAE-led strategic planning of readiness support, a revised Readiness Result Management Framework (RRMF) will help articulate the expected results from the requested support, ensuring alignment with the Readiness Strategy 2024-2027 objectives.

A tiered and flexible threshold of 30 per cent to 50 per cent is implemented that allows the adjustment to the DAE's size and financial health. This approach supports DAEs' needs without replacing the entities' primary revenue streams. This range allows for support where needed while maintaining a focus on sustainability and the long-term development of the DAE's own revenue-generating capabilities. The exact percentage will be based on the consideration of the following factors:

- **Sustainability and financial health**: The threshold must ensure the DAE remains sustainable and financially healthy, encouraging self-sufficiency while providing necessary support for climate action projects.
- **Readiness impact versus financial dependency**: The criterion should balance the need to fund impactful capacity-building activities with the risk of creating financial dependency. A threshold that is too high might disincentivise DAEs from developing their own revenue-generating activities, whereas one that is too low may not provide adequate support to establish programming capacities.
- **Varying capacities of DAEs**: The financial health and revenue-generating capacity of DAEs can vary significantly. A fixed percentage might not be suitable for all DAEs, especially smaller or community-based organisations that might have less stable revenue streams but play critical roles in local climate action.

Clarification Example

In a hypothetical example, a DAE applies for support for the full USD 1 million over the four years. The DAE's revenue for the past three years was USD 600,000 in Year 1, USD 700,000 in Year 2, and USD 800,000 in Year 3 immediately preceding the request for GCF readiness support, averaging to USD 700,000 per year.

After evaluating the DAE's financial health and size, as well as the potential impact of its proposed capacity-building activities, a 40 per cent funding threshold is set, equating to a maximum allowable request of USD 280,000. The DAE's application for USD 1 million over four years (USD 250,000/year) falls within this limit, complying with the special financial criterion designed to prevent financial dependency and ensure sustainability.

VI. Access to Readiness for DAEs

Who Can Access: Within the DAE modality, funding is provided to assist accredited DAEs as well as candidate DAEs in the advanced stages of the accreditation process[2].

How to Access: Based on strategic, medium-term planning, DAEs may access readiness funding for "integrated programme(s) of activities" with funding amounts commensurate to targeted outcomes, as outlined below. DAEs may choose to have direct access or have pre-qualified delivery partners deliver readiness support. DAEs are encouraged to submit proposals with a strategic medium-term outlook,

[2] The "advanced stages of the accreditation process" refer to resolving outstanding accreditation conditions subsequent to the GCF Board's approval of accreditation. Prior to the GCF Board accreditation decision, or pre-accreditation support, will continue to be provided under the country support modality. This is to continue fostering country ownership of the DAE nomination process, and to maintain a consistent alignment between the programming plans and activities of DAEs and the national priorities.

avoiding incremental, sporadic requests. Flexibility exists to submit more than one proposal, depending on specific needs and targeted outcomes.

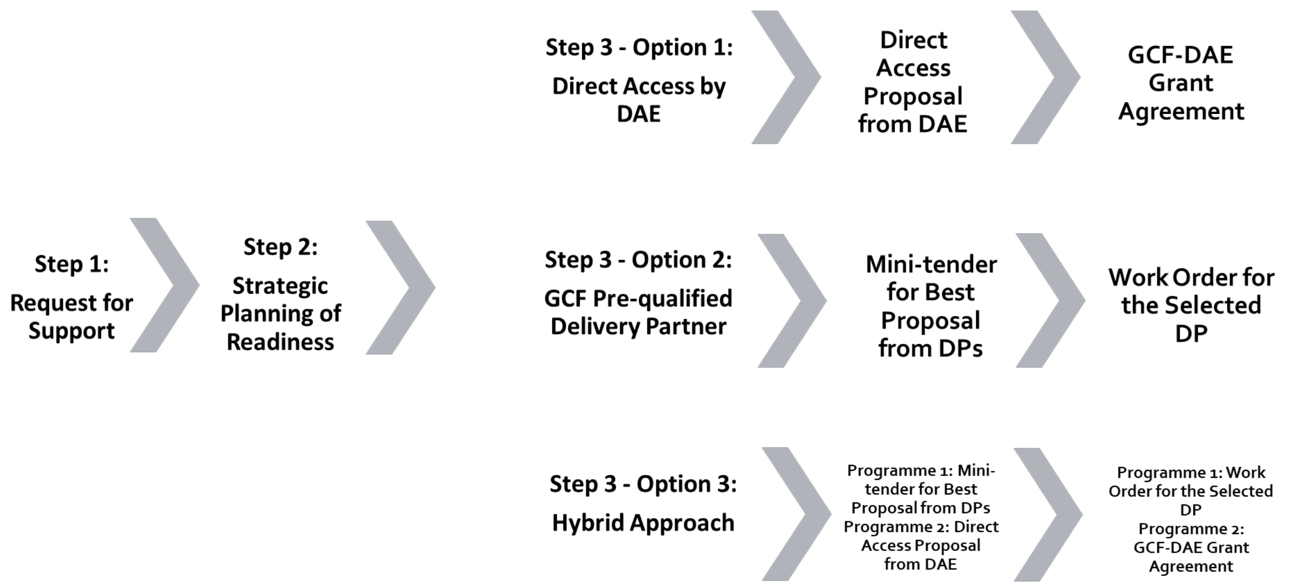
Up to USD 1 million per entity over the four-year period[3]	→	**One programme of activities for four years**, addressing the readiness objectives across mitigation and adaptation in an integrated manner. To ensure adaptive management, one four-year programme of activities shall incorporate a mid-term review that serves to confirm that the design remains well-suited to the context and to evaluate the appropriateness of the initial design in light of emerging opportunities or potential obstacles that could significantly impact the programme of activities. or **Two programmes of activities**, based on the four-year planning, with any combination of USD funding between them, up to the total envelope allocated for the DAE modality. There are no restrictions on the timing of these two programmes; they can be requested concurrently or sequentially. This flexibility caters to different objectives or significantly different areas of capacity-building if and when the integrated approach does not yield beneficial outcomes. Activities can be implemented within any period deemed appropriate, so long as a funding request(s) is approved within the GCF-2 period, i.e., 2024-2027.
Additional Request Multi-DAE programmes Covered from the total DAE envelope	→	A request can be submitted by DAEs, or the GCF Secretariat may proactively offer, multi-DAE readiness programmes. This includes promoting cooperation through peer-to-peer learning, experience sharing, and technology transfer and innovation exchanges in the context of climate change through North-South as well as South-South cooperation. These multi-DAE programmes count against the four-year cap of each of the participating DAEs[4]. In cases where GCF initiates the programme design, it will seek consensus on the proposed outcomes, outputs and activities from participating DAEs.

[3] A one-time allocation of USD 12.4 million approved for the implementation of the GCF Integrated Results Management Framework (IRMF) under decision B.29/01 has been integrated into the overall funding for the DAEs support modality to ensure ongoing support. This integration provides all DAEs with equal access to USD 1 million per entity over the four-year GCF-2 programming period. Entities previously benefiting from IRMF support will still have access to the full USD 1 million per entity, provided they exclude any overlapping work already covered through the IRMF window.

[4] A joint terms of reference will be required (see Step 2 under *How to Access – Step by Step*, below), with each DAE allocating its budget at its discretion, without any set maximum or minimum limits. Transfers or top-ups of funds between DAEs, if requested, will be considered on a case-by-case basis.

How to Access – Step by Step: Access to readiness support follows a structured three-step process, as outlined in Figure 1 below and detailed in this section.

Figure 1. Structured Process for Accessing Readiness Support



Step 1. Request for Readiness Support

To access readiness support, the DAE submits a request to the GCF Secretariat using GCF Partner Portal.

The request should clearly specify the preferred method of access (refer to Step 3 for options):

1. direct access by the DAE,
2. using a delivery partner based on the selection of the best technical and financial offers, or
3. a hybrid approach that combines both methods.

The request should state the intention to utilise the total funding through one or two programmes and include a plan for the objectives each programme aims to achieve. For example, one programme may target Objectives 1 and 3 through direct access, while another might focus on Objective 2, utilising a pre-qualified delivery partner selected via a mini-tender process.

Upon receiving the support request, the GCF Secretariat will swiftly review and prioritise it. Initial feedback will be provided within seven working days. Although the GCF Secretariat aims for a prompt response, the exact time frame may vary due to operational demands and programming considerations.

Coordinated action with the NDA/focal point: In line with the Readiness Strategy 2024-2027, DAEs have access to readiness support based on coordination with respective NDAs/focal points. "Coordination" signifies a streamlined collaboration between DAEs and NDAs to ensure alignment of DAEs' readiness support requests with the country's priorities. This requires clear communication of national goals between NDAs and DAEs, with efficient and regular communication channels between DAEs and NDAs playing a crucial function for swift decision-making and minimising delays. Evidence of such communication can be submitted as proof.

Step 2. Strategic Planning of Readiness

In line with Readiness Strategy 2024-2027, the GCF Secretariat implements a strategic, medium-term planning approach for readiness support over four years. This involves considering the DAE's current readiness status (baseline) and defining where it wants to be by the end of the fourth year (specific results). To achieve this, the DAE will need to undertake a strategic planning process, which will determine specific areas of support, capacity gaps and challenges.

The GCF Secretariat provides the illustrative, aforementioned Guide for Direct Access Entities on Strategic Planning of Readiness Support.

Insights from the planning process will ultimately form part of a **DAE Readiness Terms of Reference** (TOR). The TOR will be used to solicit competitive offers from pre-qualified delivery partners. Alternatively, if a DAE opts for direct access, they may develop the proposal themselves or receive guidance in developing a Direct Access Proposal.

Support from the GCF Secretariat: Under the DAE support modality, the GCF Secretariat may offer various capacity-building activities, such as webinars, workshops and write-shops. These resources will aim to help DAEs enhance their project development and implementation skills, particularly in relation to GCF-funded climate adaptation and mitigation efforts. Information about any available initiatives will be communicated to DAEs as opportunities arise. For strategic medium-term planning, DAEs may consider allocating a discretionary portion of their readiness funding for participation[5] in such initiatives, as they become available.

Readiness Access and Delivery Options

DAEs may choose to fulfil their DAE Readiness TORs independently, directly (Step 3 – Option 1), through a competitive bidding process to find the best-suited delivery partner (Step 3 – Option 2), or using a hybrid approach that combines both methods (Step 3 – Option 3).

Step 3 – Option 1. Direct Access by DAEs

Direct access to readiness resources follows the following sequence of activities:

4. **Strategic, medium-term planning:** The DAE undertakes strategic planning for a multiplicity of readiness needs and foundational gaps in a holistic manner over four years. Guide for Direct Access Entities on Strategic Planning of Readiness Support is provided.
5. **Direct Access Proposal Submission:** The DAE prepares and submits a readiness proposal to address the needs identified through the process of strategic, medium-term planning. A standardised template for the Direct Access Proposal is available.
6. **Contracting:** The DAE and GCF conclude an individual grant agreement. A standardised grant agreement is available upon request.

The DAE may also opt for engaging existing entities with Framework Readiness and Preparatory Support Grant Agreements (framework agreements) with the GCF Secretariat. Framework agreement holders can

[5] Participation may involve travel and accommodation, depending on the format. If conducted online, no costs will be incurred. However, if participation is in person, the DAE may need to cover the cost of travel and lodging of its staff members, which are eligible costs for coverage or reimbursement under the DAE support window.

utilise their existing agreements and receive readiness funds to implement readiness support for the DAE. The framework agreement holders are exempt from the one-time competitive selection process required for pre-qualification of readiness delivery partners with Long-Term Agreements (LTAs)[6]. The framework agreement holders can be directly invited by the DAE to address DAE Readiness TORs. To ensure the demand-driven approach to readiness support, this process can occur with or without mini competitions, depending on the request and specific needs of the DAE. It should be noted that some existing framework agreement holders may not be able to participate in mini-tenders, depending on their mandate and restrictions in engaging in competitive processes. A list of current framework agreement holders is provided.

Step 3 – Option 2. Use of Pre-Qualified Delivery Partners

DAEs may opt to fulfil their DAE Readiness TORs through a competitive bidding process to identify the most suitable delivery partner(s) from the GCF pre-qualified list.

Given medium-term, integrated nature of readiness programmes potentially spanning multiple technical areas and sectors, it might be necessary to utilise the specialised knowledge and delivery capabilities of a qualified delivery partner, or a consortium of delivery partners. Furthermore, with the emphasis on programming objective and the adoption of the new, strategic approach to readiness support, DAEs may consider support from delivery partners who are specifically pre-qualified for the relevant expertise.

The use of pre-qualified delivery partners includes the following sequencing of activities:

(a) **Strategic, medium-term planning - TOR Development:** The DAE undertakes strategic planning for a multiplicity of readiness needs and foundational gaps in a holistic manner over four years. This will form DAE Readiness TORs.

(b) **Mini-Tender:** The GCF Secretariat conducts a mini-tender among pre-qualified delivery partners[7] to address the DAE Readiness TORs. These partners submit technical and financial proposals that are evaluated by a panel including a DAE representative, GCF experts and, if needed, independent experts. The focus is on value for money and finding the best solutions for the DAE Readiness TORs. A standardised mini-tender template for pre-qualified delivery partners is provided.

(c) **Work Order:** A delivery partner or consortium, selected based on their technical approach, methodology and cost, receives a work order from the GCF Secretariat. This work order outlines the readiness support activities, deliverables, timelines, reporting and payment terms. Since there is no need for individual grant agreement negotiations, work can begin immediately. A standardised work order for pre-qualified delivery partners is available upon request.

[6] Refer to A Note on the Use of the Pre-qualified Delivery Partners, in this section.

[7] Ibid.

A Note on the Use of the Pre-qualified Delivery Partners

The GCF Secretariat undertakes to pre-qualify delivery partners once during the 2024-2027 period. Pre-qualification will be based on an open and transparent competitive selection process, evaluating international, regional and local delivery partners' expertise in climate investment areas, including technical skills, project design and implementation experience, capacity-building and experience in operating effectively and efficiently in country or regional contexts.

Pre-qualified partners are contracted to GCF through LTAs. While LTAs do not guarantee work, they designate organisations as preferred suppliers for up to five years, allowing them to participate in mini-tenders to address DAE Readiness TORs. The mini-tender process is designed to identify the best options in terms of approaches, methodologies and costs, offered by top-tier expertise and service providers carefully selected by the GCF Secretariat for their ability to deliver the comprehensive, multi-year, multi-component readiness support. LTAs are established once in the 2024-2027 period to ensure a rapid start of readiness activities, avoiding delays in individual grant agreement negotiations.

It is important to note how the outlined option for the utilisation of a pre-qualified delivery partners delivers significant benefits to DAEs, including access to top expertise and improved speed and efficiency in readiness support delivery.

(a) **Access to Top Expertise**: By leveraging pre-qualified international, regional and local delivery partners, DAEs can benefit from the extensive expertise and experience of professional outfits selected from the open market for their experience in climate financing, technical assistance, project design and capacity-building. This ensures that readiness activities are carried out by highly qualified organisations experienced in a wide range of sector and technology expertise, experience with policy/reform design and implementation and climate investment / project design and implementation as well as reporting and knowledge management and learning.

(b) **Improved Efficiency**: The pre-qualification of delivery partners and the use of LTAs streamline the process of accessing readiness support, reducing the time and administrative burden associated with individual grant contract negotiations.

DAEs are put in charge by understanding the value of the various options available, which are designed to provide tailored, efficient and effective readiness support to meet the diverse needs of DAEs with efficiencies gained at the portfolio level.

Step 3 – Option 3. Hybrid Approach

DAEs may opt for a hybrid approach, combining the strengths of both direct access and the use of pre-qualified delivery partners. This method allows DAEs to tailor their readiness support to specific objectives and programmatic needs. Here is how it might work:

Programme 1 - Specialised Support: The DAE may implement a readiness programme that addresses Objective 2 through pre-qualified delivery partners who are experts in the design and implementation of climate finance programmes and projects, for example across specific sectors or technologies. This provides benefits of specialised external expertise as well as advantages of streamlined contracting process provided under the LTA.

Programme 2 - Direct Implementation: Simultaneously, the DAE could tackle Objectives 1 and/or 3 by directly accessing readiness resources.

The mix of objectives and/or readiness needs to cover for each programme is entirely at the discretion of the DAE, allowing flexibility to cater to specific contexts and requirements.

The hybrid approach includes the following sequencing of activities:

1. **Strategic, medium-term planning - TOR Development:** For projects implemented through pre-qualified delivery partners, the DAE develops TORs that are addressed via mini-tenders. **For direct access, the DAE develops the Direct Access Proposal.**

2. **Readiness Delivery:** For projects involving pre-qualified partners, the GCF Secretariat manages the selection process through mini-tenders, followed by issuing work orders to the chosen LTA-holders. For direct access, the DAE submits a Direct Access Proposal and follows direct access contracting process.

V. Disbursements by Milestones Framework

This guide, while primarily focused on accessing readiness support, also introduces a Disbursement-by-Milestone (DbM) Framework, which is an important consideration when strategically planning to access readiness support over the medium term.

Why Disbursement-by-Milestone: DbM is designed to enhance the efficiency and effectiveness of readiness expenditure in line with the result-orientation principle of the Readiness Strategy 2024-2027. The strategy emphasises results-orientation and clear causal links between the requested readiness support and the country's NAPs, NDCs and LTS, as well as the broader GCF Strategic Plan’s targeted results. Well-designed DbM can enhance results delivery by enhancing accountability for achieving practical results and aligning incentives towards achieving them. It fosters innovation and discretion in achieving results and improves efficiency by ensuring disbursements are made based on the progress in achieving milestones for every standardized deliverables. A guidance document on standardized deliverables is available for reference.

How DbM Works: Specific results and/or standardized deliverables are agreed upon:

- If the preferred method involves using GCF pre-qualified delivery partners, the agreement on results will include the GCF Secretariat, the DAE and the competitively selected delivery partner

- If the preferred method is direct access, the agreement on results will include the GCF Secretariat and the DAE

Results and standardized deliverables must demonstrate a clear link to the readiness objectives and outcomes outlined in the RRMF, which is the primary reporting tool the GCF Secretariat uses to track and measure the success of the Readiness Programme. The RRMF is revised to align with the Readiness Strategy 2024-2027, with the aim of simplifying and streamlining results management and reporting in line with the three objectives.

The total main envelope for the DAE support window over four years is USD 1 million per entity. The budget should be planned in line with the relative weights described in the Readiness Strategy 2024-2027, to the degree possible. Specific needs of the DAE may necessitate a different weight distribution per objective. The relative weights per objective in the Readiness Strategy 2024-2027 are:

- 30 per cent for activities under Objective 1
- 60 per cent for activities under Objective 2
- 10 per cent for activities under Objective 3

However, these allocations are not prescriptive. DAEs may adjust the distribution of resources to better reflect their unique context, priorities, and capacity needs. Any such variations can be discussed and jointly agreed upon with the GCF Secretariat, which remains committed to supporting DAEs, ensuring flexibility where needed.

DAEs can select standardized deliverables and milestones in the DAE Readiness Proposals that sets covenants for disbursements, as per approved proposal.

Upon the issuance of a Work Order to a pre-qualified delivery partner or the conclusion of a direct access grant agreement, 25 per cent of the funding is advanced to cover initial costs and initiate readiness activities. The remaining 75 per cent of the funding is disbursed based on the achievement of agreed-upon results and deliverables, in instalments proportional to each result or deliverable. Flexibility in the disbursement schedule and percentages may be offered, depending on the project duration and approved funding, and such arrangements should be jointly discussed and agreed upon with the GCF Secretariat.

Payments are released following the approval of standardized deliverables and milestones, as follows:

- If the preferred method involves using GCF pre-qualified delivery partners, approval is required from both the DAE and the GCF Secretariat.
- If the preferred method is direct access, approval is required from the GCF Secretariat.

Work Orders (in case of delivery partners) or grant agreements (in case of direct access) will specify payment conditions, including the requirements for the initial advance and the verification process for deliverables.

The following financial provisions may be included in the strategic, medium-term planning:

- External Audit: A provision to cover the cost of an independent, third-party financial audit of readiness resource utilisation. The audit is required annually, beginning from the project start date. Access to an audit report template and TOR is available online.
- Contingency: Up to three per cent of the total activity budget may be allocated to address unforeseen or unplanned expenses during the implementation of readiness activities.

Annex 1. GCF Strategic Plan 2024-2027: Targeted Results

The Strategic Plan for 2024-2027 articulates how GCF will significantly enhance its support to developing countries, improve access and strive to deliver the highest levels of catalytic impact through its key assets – financial resources, partnerships, convening power, people and knowledge. The plan sets a comprehensive set of targeted results to be delivered over the 2024 to 2027 programming cycle, as follows:

1. More than 100 developing countries directly supported by GCF to advance the implementation of their NDCs, NAPs or LTS through integrated climate investment planning and/or developing high-quality climate project pipelines for GCF funding;
2. Doubling the number of DAEs with approved GCF funding proposals (FPs) through strengthened climate programming capacity and increasing the allocation of GCF resources through DAEs;
3. CIEWS: 50 to 60 developing countries particularly vulnerable to the adverse effects of climate change protected by new or improved early warning systems;
4. Food: Support for developing countries that results in 190 to 280 million beneficiaries adopting low-emission climate-resilient agricultural and fisheries practices, securing livelihoods while reconfiguring food systems;
5. Ecosystems: Support for developing countries that results in 120 to 190 million hectares of terrestrial and marine areas conserved, restored or brought under sustainable management;
6. Infrastructure: 45 to 60 developing countries supported by GCF to develop or secure low-emission climate-resilient infrastructure through systemic and/or country-driven resilience planning, funding and/or de-risking of investments, including those that draw on nature-based solutions or ecosystem-based approaches;
7. Clean Energy: 20 to 30 developing countries supported to expand access to sustainable, affordable, resilient, reliable renewable energy, particularly for hardest to reach, and/or to increase renewable energy sources in the energy mix;
8. Transport, buildings, industry: 18 to 25 developing countries supported to shift towards clean and efficient energy end-use for transport, building and industry sectors, including through electrification, decreasing energy consumption and novel solutions and emerging technologies for hard-to-abate sectors;
9. 40-70 approved proposals for adaptation projects, including for locally led adaptation action;
10. Support for developing countries that results in 900 to 1500 local private sector early-stage ventures and MSMEs provided with broad-based seed and capital for innovative climate solutions, business models and technologies, with a focus on adaptation, energy access and transport sectors and removing barriers for home-grown innovation; and
11. Support for developing countries that results in 90 to 180 national and regional financial institutions supported to access GCF resources, and other green finance, particularly for MSMEs.
